Hardened wood floors – real wood floors that last for generations

Durable and dent-resistant Scandinavian-designed hardened wood floors that feature the patented Woodura™ technology from Välinge Innovation, making the floors three times stronger. The technology also ensures these real wood floors are produced in a way that uses raw materials optimally. Together with the leakproof 5G Dry™ locking system and the moisture-resistant Compositex wood core, these floors can last for generations.

Rigid Core floors – leave an impression without leaving a mark

Premium, noise-reducing rigid core floors designed in Sweden with the look and feel of luxurious wooden floors. Incorporating the Liteback™ technology by Välinge Innovation, this range is ideal for a busy household: great sound-absorbent qualities, easy to clean and water-resistant, while more sustainable than other traditional options. Using 5G Dry™, simply click the panels into place with watertight joints ensuring no water leaks through the seams.

EASY INSTALLATION

The leakproof 5G Dry™ floor locking system is well-known for providing an easy, fast and reliable installation. No glue or nails are needed – just click the pieces together.

We have developed these Scandinavian-designed products for the modern household. Each product category represents our commitment to excellence as we help people create inspiring environments that last for generations.”

Hannes Lindblom, Head of Product Management at Bjelin

Parquet (engineered wood) – timeless elegance that stands the test of time

A high-quality floor that consists of three layers, with the wood fibres in each layer running in perpendicular directions to each other. This reduces the natural movement of the wood, providing a stable floor. Floor-locking technology, developed by sister company Välinge Innovation, ensures an easy and quick installation.

Easy installation

The 5G™ floor locking system provides an easy, fast, and reliable installation. No glue or nails are needed. Simply click the pieces together. For the herringbone parquet, ready-made starting triangles further speed up the installation.

Short project time

Herringbone parquet (engineered wood) – featuring click technology

Made from three-layer parquet, this classic flooring is our first herringbone to incorporate floor-locking technology. The patented 5G™, developed by sister company Välinge Innovation, in combination with floor panels that are surface-treated and already stained, means labour-intensive steps are eliminated, and costs are reduced. The timeless design, the construction, and the option to sand and treat the floors in the future, creates a truly long-lasting experience.
