

Parquet Herringbone

Herringbone parquet (engineered wood) – featuring click technology

“*Our herringbone flooring is a bestseller in Scandinavia due to its timeless and classic design, and thanks to the innovative floor-locking technology, installation requires significantly less time and effort.*”

Hannes Lindblom,
Head of Product Management at Bjelin

Made from three-layer parquet, this classic floor is our first herringbone to incorporate floor-locking technology. The patented 5G™, developed by sister company Välinge Innovation, in combination with floor panels that are surface-treated and already stained, means labour-intensive steps are eliminated, and costs are reduced. The timeless design, the construction, and the option to sand and treat the floors in the future, creates a truly long-lasting experience.

LESS TIME-CONSUMING

5G MEANS EASY INSTALLATION

NO GLUE OR NAILS

SLAVONIAN QUALITY OAK

READY FROM THE BOX

SUSTAINABLE MANUFACTURING

FSC®-certified oak from Croatia
3-layer parquet
Fast installation with 5G™
Sophisticated design
Traditional Scandinavian format
Easy-to-handle panels
Short project time

After installation, there is no need to sand or treat the surface of the floor. However, the floor can be sanded and refurbished in the future to last longer.

Easy installation

The 5G floor locking system is known for providing an easy, fast, and reliable installation. No tools, glue or nails are needed. Simply click the pieces together, which also limits the gaps between the panels. Ready-made starting triangles further speed up the installation.

The HDF core means the floor can withstand the stressors created by humidity variations.

Gradings

Select
Clean-looking
and harmonious.

Rustic
A lively and powerful
sense of wood.

The installation results in perfect alignment, and since the separate panels are mechanically locked together, the natural movement in the wood is absorbed.
